FOR IMMEDIATE RELEASE (TSX V Symbol: AUX)

Oct. 9, 2014

Auramex Resource Corp. (the Company) announces that Pretivm Resources Inc. has completed the 500 metre diamond drill hole at the Company's 100% owned Tide North property, 45 kilometres north of Stewart, B.C. The hole was designed to test anomaly B, a deep lying conductivity target within the Jurassic Salmon River Formation, above its contact with Lower Hazelton Group volcanic rocks. This stratigraphic interval hosts the past producing Eskay Creek deposit, 42 km northwest of Tide North. A technical report dated 13th March, 2013, available on the Company's website, shows the relationship of the B anomaly to the untested A and C anomalies nearby.

The drill hole intersected a thick folded sequence of highly carbonaceous clastic sedimentary rocks inferred to have been deposited in a quiet basin setting. Preliminary examination shows that sections of the core contain evidence of minor sedimentary sulphide deposition. Dr. Paul Metcalfe, PGeo., Vice President of Exploration, has recommended a program comprising geological mapping, downhole and surface geophysical surveys, and a geochemical survey to refine targets for further diamond drilling.

The core is stored in a secure North Vancouver warehouse for logging and analysis, and is available for examination by potential optionees.

A financing announced June 9th for 2.5 cents per unit continues to be available to certain existing shareholders and accredited investors.

About Auramex Resource Corp. – website - www.auramex.com

Auramex Resource Corp. is a junior mining exploration company with projects in British Columbia and in Sinaloa State, Mexico. In B.C., the Company holds approximately 36,000 hectares near Stewart, a grass roots exploration project.

For information on Auramex please contact Judie Whitby at (604) 924-9376 or refer to the company's website: www.auramex.com.
